OBJECTIVE

Aspiring AI Engineer and Web Developer pursuing a Bachelor's degree in Information Technology at National University of Modern Languages (NUML), Islamabad. Passionate about leveraging Artificial Intelligence, Machine Learning, and Web Development to create innovative solutions. Actively seeking internship opportunities to apply skills in AI and web technologies to real-world projects.

PERSONAL PROJECTS

BulkWise Emailer

Technologies: Python, Flask, HTML, CSS, smtplib, pandas
Role: Solo Developer
Description: Developed a web-based application to send customized bulk emails. Users can upload a CSV contact list, write a message, and send emails instantly through a simple and responsive interface

Key Features:
- Enabled CSV upload for easy contact management Streamlined the email sending process with real-time feedback.
- Designed a clean and user-friendly web UI suitable for email campaigns and announcements
- **GitHub:** link

Blood Donor System

Technologies: HTML, CSS, JavaScript, PHP, MySQL, XAMPP, Git & GitHub
Role: Solo Developer
Description: Developed DonorPoint, a web-based blood donation management system to connect donors with those in need. Features a responsive interface for donor registration, search, and admin management, hosted locally with XAMPP and version-controlled on GitHub.

Key Features:
- Donor registration and search by blood group/location •
Admin dashboard for CRUD operations
- Responsive design with CSS animations and hover effects
- **GitHub:** link

CORE SKILLS

- **Web Development:** HTML, CSS, JavaScript, Flask, PHP, XAMPP, Bootstrap
- **Version Control:** Git, GitHub
- **Database & Data Handling:** SQLite, MySQL
- **Tools & Deployment:** GitHub Pages, XAMPP Server, Local Hosting
- **Libraries & Frameworks:** Flask, Pandas, smtplib, email, Jinja2, SQLAlchemy, Streamlit, PyTorch, TensorFlow, Hugging Face
